

## Wireless@SG Virtual Private Network (VPN)

Wireless@SG Virtual Private Network (VPN) service is now available free to all Wireless@SG users until December 2009. The VPN service provides secure wireless access by encrypting data transmitted over the Wireless@SG network, so that users can have a greater peace of mind while surfing the Internet and using applications such as e-mail, instant messaging and file-sharing.

## How to Launch the Wireless@SG VPN Service

### Step 1:

Log onto Wireless@SG using your User ID and password.

### Step 2:

Click on the **“Encrypt your Wireless Connection”** icon or the **“Launch SSL VPN”** hyperlink located on the Wireless@SG operators’ landing page.

### Step 3:

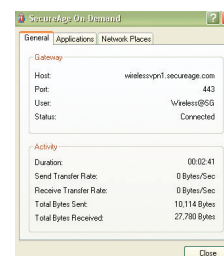

A Terms and Conditions dialogue box will appear. Click **“Launch SSL VPN”** to accept the Terms and Conditions and launch the VPN service.

### Step 4:

The VPN will initialise and a window will pop up indicating that the VPN is activated.

VPN initialises

VPN is activated
