

SecureAPlus is now available in four languages

With the latest version update, SecureAPlus introduces Indonesian, Japanese and Polish language support to address its growing yet diverse user base

May 12, 2016 - SecureAge Technology has released an update to [SecureAPlus](#), a PC security solution that combines multiple cloud anti-viruses with Universal AV and its powerful Application Whitelisting, to add support for various languages.

SecureAPlus has been available at no cost to the public through its Freemium model since August 2013. Since then, it has been consistently improving and adding better security features to protect PCs against viruses and malware.

The release of the latest version, SecureAPlus 4.2.2, marks the first time the application whitelisting software will be available in any language other than English.

A month after releasing the revamped user interface (UI), SecureAPlus has enjoyed a surge in the number of new users daily. This has also garnered significant interest from segments of users who do not have English as their primary language.

According to Cabrina Yeo, Marketing Executive of SecureAge Technology, “we have received numerous requests to localize SecureAPlus into more languages, so we took the recently concluded Beta as an opportunity to reach out to our most dedicated users to help with translation.”

With the help of the growing SecureAPlus community, the translation of the application and its online pages into various major languages is ongoing. While different languages will be added over time, customer support of SecureAge Technology remains in English. This is something the company is setting its sights on improving once the user base grows further.

The latest version of SecureAPlus is now fully available in Indonesian, Japanese, and Polish. It is also partially available in French and German with more languages to be added in the future.

About SecureAPlus

[SecureAPlus](#) is a free security software developed by SecureAge Technology that protects PCs from malware & viruses with its powerful but easy to use Application Whitelisting and reliable detection rates of more than ten cloud Anti-Virus engines with Universal AV. It leverages the power of the cloud allowing for low resources used and compatibility with other installed anti-virus and anti-malware applications, making it the perfect security upgrade for any Windows PC.

About SecureAge Technology

SecureAge Technology is a rapidly growing data security company that places security and usability on equal footing. Headquartered in Singapore, we are trusted by governments, research institutes, and forward-thinking organizations to protect them from the most advanced and persistent cyber threats in the world. What makes SecureAge different, is we have built a reputation for data-centric and intuitive security solutions that protect data not only when it is stored, but also when it is in use, and in transit. We've achieved this by holding strong reign on our belief that users shouldn't have to become cybersecurity experts to escape data liabilities. Instead, encryption should be inherent, invisible, and instinctive. To protect data when it is most vulnerable, security must take place at the file-level, operate silently in the background, and support the way in which people collaborate. That's why our users can divert their resources to focus on other challenges – SecureAge users enjoy 100% file-level security, every file, every place, and every time.
